New shopping marketplace

Task

You are part of the QA team for the company Saucedemo. You are in a crucial period where the new marketplace has been deployed to the pre-production environment, and the entire website needs to be tested with different users, bugs must be reported, and the automation process must be created to ensure everything works correctly.

Requirements

- Webpage: https://www.saucedemo.com/
- Tasks to do:
  - Perform manual testing and error reporting.
  - Perform automated tests.
    - Go to https://www.saucedemo.com/
    - Perform login process with different users (shown on webpage)
    - Check website functionalities are working fine for every logged user.
    - For every reported bug, a test should be FAIL.
    - If there is no bug, the test should be PASS.

Take into account

- This is a technical test, doesn't need to be perfect, we know your time is short.
- The test needs to be done with Robot Framework + Selenium.
